

New zone at Energylandia! Aqualantis is coming soon!

Aqualantis is the newest zone of Energylandia, and its opening is coming in 2021! The newest part of the Park has been designed to resemble an ancient, sunken city and it sprawls over an area of 6 hectares. More than 1000 people were involved in its creation! At the time of the opening of the new zone we will also launch the great and mighty Abyssus: yet another spectacular roller coaster, the main attraction of this new land. The opening of Aqualantis will give you the chance to discover 10 brand new, astonishing attractions and a marvellous new show!

Abyssus; a roller coaster Poland has never seen before!

Abyssus is a new coaster in Energylandia which is certain to become an absolute favourite! It's a Shockwave Double Launch Coaster made by Vekoma, a well-known Dutch producer. The construction of Abyssus was quite a challenge, as it consists of 90 500 elements. That's approximately as many elements as you would need to build 5 Eiffel towers... Impressive, isn't it? The structural parts were manufactured in various countries - the Netherlands, Germany, the Czech Republic, Slovakia and even the USA. All this posed a considerable logistical challenge for the builders, which is why the project was supervised by more than 200 people! But the number of components doesn't tell the whole story. As unbelievable as it sounds, the weight of the structure is 815 tonnes. That is as much as two medium-size space rockets! Each car weighs 7 tonnes, and it can take 16 passengers at a time for a truly thrilling ride. Would you like to know what it looks like? Right from the start, prepare to be amazed. We will not take you slowly to the top of the track, as the traditional lift has been replaced with an electromagnetic launch. The force of the Abyssus is simply incredible! It is 5210 KM, which equals the power of 7 engines of Formula 1 racing cars. Thanks to its enormous force, the Double Launch Coaster can reach a maximum speed of 100 km/h! During the ride on the impressive 1316 m long track, you will hit 4 spectacular inversions and reach a height of just over 38 m. Numerous turns, fast changes of levels, and the resulting high overloads and wonderful effects of weightlessness - all this will make your adrenaline levels soar. And then, all of a sudden, about midway through the ride, the effect of weightlessness will knock you into your seat a second time, thanks to the magnetic ejection. Hard to believe? But true! Passengers will travel over small lakes, ponds, and various water features during the ride. The creators of the coaster, however, assure us that no one will get wet, because the cars will not come in direct contact with water at any point. „Abyssus” Roller-coaster (model: Supershock Wave,

type: double LSM Launch Coaster), in addition to the extremely attractive train acceleration system (2 magnetic LSM launchers), has been additionally equipped with an innovative, active system of shaping the driving dynamics, which allows for very smooth and gentle, additional acceleration of the train, thanks to the use of a patented control system for boosting motors (two patents). The first pair of boosters measures the speed of the train that invades them, and the next pairs of boosters (remotely controlled electromagnetic motors) bring the train up to the set value, maintaining the speed constant given from the first pair of measuring boosters in the first acceleration phase. This innovative system allows for very gentle control of positive and negative acceleration, which in turn provides exceptional comfort for passengers and an amazing ride experience with our new roller-coaster. So, who's up for a ride?

Aqualantis, the Kingdom of the Ocean!

Energylandia will surely amaze its Guests in 2021 with its new (6th) zone of amazing fun! Aqualantis is another part of the Park that was created on an enormous plot of land, which totals an impressive 6 hectares. More than 1000 people were involved in the creation of this zone! This huge number is made up not only of architects and engineers, but also of structural fitters, construction workers, machine operators and even mountaineers. Of course, apart from them, there were also people involved in the production of carousels, roller coasters and other equipment, as well as Energylandia employees working on the new land. It is thanks to all of them that our Amusement Park is able to make yet another exciting area available, and it looks like something straight out of your dreams! Aqualantis opens a new chapter in the construction and theming of the next development stages at Energylandia. The party responsible for the design, visual effects and theming is Jora Vision from the Netherlands. This company has been a part of the entertainment industry all over the world for decades now, and has designed such parks as: Disneyland, Walibi, and Europa Park.

The story of the new zone at Energylandia makes references to the ancient city of Atlantis. One day the city was taken by a giant wave. It wasn't until recently that the ruins have been found by some brave explorers. They've built a pumping station whose replica you can find in Abyssus. The Roller Coaster has been designed like a pumping station for draining water from the sunken kingdom. Now the time has come for all of us to take an active part in the exploration of Aqualantis, the 6th zone at Energylandia! Each step will take us deeper into the incredible story of this amazing city. The streets resembling an ancient, sea land and many more details made with utmost precision... Aqualantis is the place where whole families will be able to enjoy many unbelievable attractions that were never seen before.

10 New Attractions!

The new zone at Energylandia will guarantee an utterly amazing experience not just for extreme adrenaline seekers. The Light Explorer is a family boomerang roller coaster, or a coaster that moves along the track heading one way, and then returns with all passengers facing backwards. Another new attraction is the Grotto Expedition, a sightseeing boat expedition that leads through mysterious caves and a magnificent lagoon outside the city. Energylandia remembers the youngest Guests of the Park as well, therefore in the new area you will find several smaller carousels. One of them is the Burning Engine, which allows the kids to sit behind the wheel of a "real fire engine" and try to extinguish fire in a small building in the middle. The other attraction for children will be the Submarine Dive, a carousel with small submarine boats. Some other things that you will be able to find in the new part of the Park are Water Works, a water playground, and new interactive carousels: Stormy Ship and Magic Pump. For those, who like to stay on the dry land, but love spectacular shows, Energylandia has prepared something really special. You will be able to enjoy the Aquajump stunts, which are acrobatic jumps into the water of a high tower. We know that you will enjoy watching those

brave artists a lot. In addition to all this, in the new zone you will be able to take a ride on the Tidal Wave Twister. It is a Disco Coaster, a twirling disc which moves around a short track, just like it was dancing, and pivoting up and down. This is how we are going to waltz into the main market square of the city. This is place where people used to meet up, rest, and catch their breath. It isn't going to be any different this time around, as we will find a number of snack and delicious sweets selling points here. Aqualantis will also have plenty of little shops with souvenirs from such amazing adventures.

Energylandia and our plans for the future!

Exciting carousels, charming coasters, and unique water attractions... All that and more awaits you in our Amusement Park! The Family Zone with the Boomerang Roller Coaster, Extreme Zone with the Mayan, the Fairy-tale Land with its adorable Energuś coaster and the Flying Swings, or maybe you'd prefer the Big Milk Water Park, or Dragon Town? Everyone, regardless of their age, will surely find the perfect place to have fun for themselves, and will have an amazing time at Energylandia. Believe us when we tell you that this new zone is not the end of the development of our Park, it is just the beginning! In the future our Park will span 200 hectares. Those plans involve an expansion of new theme lands, and certainly new roller coasters! There will also be new attractions, an indoor water park, more restaurants, and a hotel. We know that our Polish and foreign Guests have fallen in love with our roller coasters and choose this type of entertainment more and more frequently. Zator already attracts millions of visitors from all over Europe who are looking for an attractive way to spend their free time. It is for you that Energylandia works so hard to ensure that your visit to our Park was full of joy, carefree fun, happiness, incredible adventures, and unforgettable memories. Head to Zator and find out for yourselves. You won't regret it!
